Forecast for Friday 18 Sep 2020

Weather: Any mist or fog quickly lifting and then clearing during Friday morning to give another dry and sunny day with little if any in the way of cloud. A moderate to strong easterly wind will develop in some areas with gales likely over higher ground. Remaining dry and clear through the evening.

Chance of cloud free mountain/hill tops above 800m: 80% becoming 100% by mid to late morning. Patchy mist may lift into thin filaments of cloud around the 500-700m mark for a few hours after dawn, but by mid to late morning all cloud should have dispersed to leave blue skies and unbroken sunshine.

Visibility: Locally very poor in any mist or fog first thing. Otherwise very good with superb visibility of distant hills and landmarks by the afternoon and just a slight haze persisting at lower levels.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A strong and gusty easterly wind developing in parts of the region. The strongest gusts are likely over the summits and over and just west of ridges where gales are likely. Sudden gusts are however also possible in some lower lying areas to the west of the more major hills/mountains. Some lower lying areas, especially in the east, will have light winds throughout.

Forecast for Saturday 19 Sep 2020

Weather: Strong gusty winds continuing over the summits through the early hours, but all areas having a dry night with clear spells. Some areas of low cloud are possible during the morning, but once these have cleared, Saturday will again be a dry and generally sunny day. Windy for most places with again the strongest gusts over and to the west of major summits and ridges.

Maximum wind: Easterly 30-35mph gusting 40-50mph at times.

Chance of cloud free mountain/hill tops above 800m: 60%, becoming 100% by late morning. Periods of cloud on some, particularly east facing, slopes at first, around 500-600m. Cloud thinning and dispersing mid-morning with few if any clouds left by noon.

Visibility: Locally very poor in any hill cloud first thing. Otherwise very good with superb visibility of distant hills and landmarks by the afternoon and just a slight haze persisting at lower levels.

Temperature: **Valleys:** Plus 7 Celsius, rising to plus 21 Celsius.
At 800m: Plus 6 Celsius, rising to plus 13 Celsius.
Freezing level: Above the summits.
